Sudden Cardiac A	rrest Informat	 · · · · · · · · · · · · · · · · · · ·	

Sudden cardiac arrest (SCA) is a leading cause of sports-related death. This policy provides procedures for educational requirements of all paid coaches and recommends added training. Sudden cardiac arrest is a condition in which the heart suddenly and unexpectedly stops beating. If this happens, blood stops flowing to the brain and other vital organs. SCA can cause death if it's not treated within minutes.

Symptoms of SCA include, but not limited to: sudden collapse, no pulse, no breathing.

Warning signs associated with SCA include: fainting during exercise or activity, shortness of breath, racing heart rate, dizziness, chest pains, extreme fatigue.

It is strongly recommended that all coaches, whether paid or volunteer, be regularly trained in cardiopulmonary resuscitation (CPR) and the use of an automated external defibrillator (AED). Training is encouraged through agencies that provide hands-on training and offer certificates that include an expiration date. Beginning June 1, 2021, a school employee or volunteer with current training in CPR and the use of an AED must be present at each athletic event during and outside of the school year, including practices, workouts and conditioning sessions.

The AED must be in a clearly marked and publicized location for each athletic contest, practice, workout or conditioning session, including those conducted outside of the school year.

What to do if your student-athlete collapses:

- 1. Call 911
- 2. Send for an AED
- 3. Begin compressions

### FHSAA Heat-Related Illnesses Information

People suffer heat-related illness when their bodies cannot properly cool themselves by sweating. Sweating is the body's natural air conditioning, but when a person's body temperature rises rapidly, sweating just isn't enough. Heat-related illnesses can be serious and life threatening. Very high body temperatures may damage the brain or other vital organs, and can cause disability and even death. Heat-related illnesses and deaths are preventable.

Heat Stroke is the most serious heat-related illness. It happens when the body's temperature rises quickly and the body cannot cool down. Heat Stroke can cause permanent disability and death.

Heat Exhaustion is a milder type of heat-related illness. It usually develops after a number of days in high temperature weather and not drinking enough fluids.

Heat Cramps usually affect people who sweat a lot during demanding activity. Sweating reduces the body's salt and moisture and can cause painful cramps, usually in the abdomen, arms, or legs. Heat cramps may also be a symptom of heat exhaustion.

#### Who's at Risk?

Those at highest risk include the elderly, the very young, people with mental illness and people with chronic diseases. However, even young and healthy individuals can succumb to heat if they participate in demanding physical activities during hot weather. Other conditions that can increase your risk for heat-related illness include obesity, fever, dehydration, poor circulation, sunburn, and prescription drug or alcohol use.
